#### WELDED PIPE ONE SEAM with Clamp Connection

Pressure Class Rating: Negative 10" Water Gauge Max

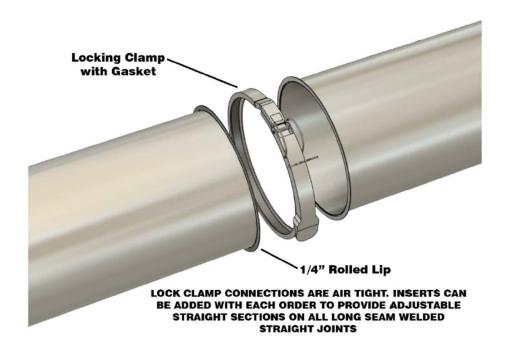

Sizes Available: Odd sizes: 5", 7", and 9", Even Sizes: 4" through 18"

Lengths Available: 6" through 591/2"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Fabrication:** Sheets of metal are cut per diameter stretch out at 5' lengths. Then rolled into desired diameters, creating a solid round tube with one longitudinal seam which is butted up, tack welded on 4 inch centers, and then fully welded. A ¼ inch lip is rolled out on each end of the pipe to accept the clamp connection.

**Connection:** Straight sections and fittings come with a ¼" rolled out lip, butting up the straight sections and fittings to accept the clamp on connection. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings

**Welded Pipe One Seam with Clamp Connection** 

#### **GORELOCK ELBOW** with Clamp Connection

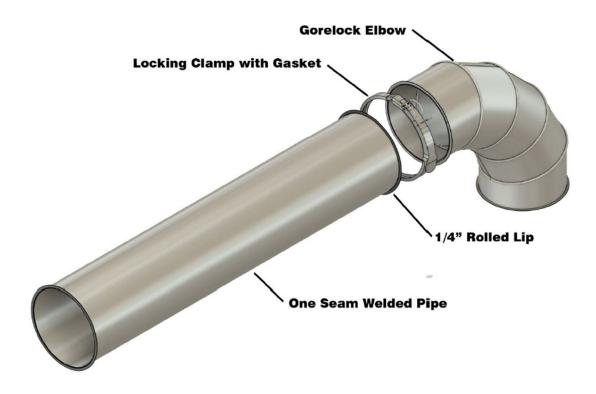

Pressure Class Rating: Negative 10" Water Gauge Max

Sizes Available: Odd sizes: 5", 7", and 9", Even Sizes: 6" through 18"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Fabrication:** Elbows are available at any angle. Standard segmented elbows have a gorelock transverse seam and a stitch welded longitudinal seam. Radius is standard 1.5x centerline although any radius is available.

**Connection:** Elbows come with a ½" rolled out lip. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings.

#### **Welded Pipe One Seam with Clamp Connection**

## **GORELOCK REDUCER** with Clamp Connection

Pressure Class Rating: Negative 10" Water Gauge Max

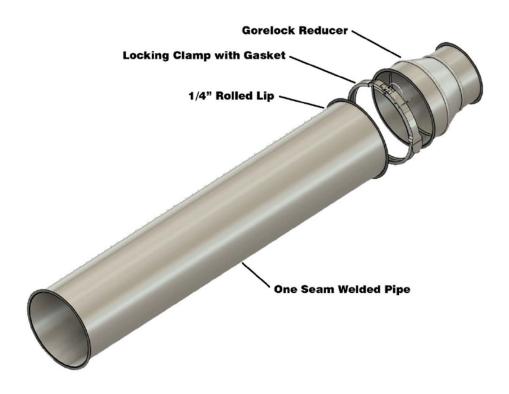

Sizes Available: Odd sizes: 5", 7", and 9", Even Sizes: 6" through 18"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Lengths Available:** Length of the reducer is determined by the set of the reducer. Length is equal to 3 times the largest set, 4" minimum.

**Fabrication:** Reducers are made with stitch welded longitudinal seams and with gorelock collars. Standard reducers are concentric, however eccentric and offsetting reducers are available.

**Connection:** Reducers come with a ¼" rolled out lip. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings.

#### Welded Pipe One Seam with Clamp Connection

#### FULL BODY TAKEOFF with Clamp Connection

Pressure Class Rating: Negative 10" Water Gauge Max

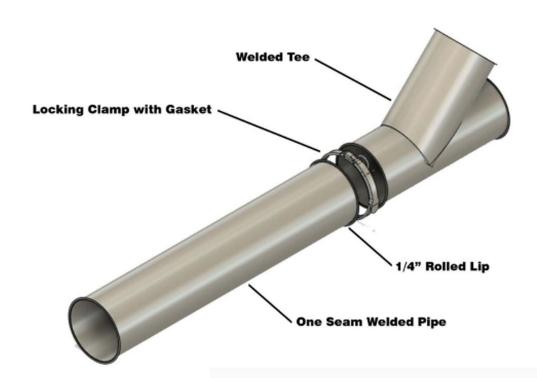

Sizes Available: Odd sizes: 5", 7", and 9", Even Sizes: 4" through 18"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Lengths Available:** Length of tees and crosses are determined by the diameter of the branch.

**Fabrication:** Lateral 45 degree tees and crosses are the typical side take off, however branches can come off at any angle. Tees and crosses have welded seams. This fitting can be used to reduce the system's main truck line.

**Connection:** Tees and Crosses come with a ½" rolled out lip. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings.

#### **WELDED PIPE ONE SEAM** with Clamp Connections

Pressure Class Rating: Negative 10" Water Gauge Max

Sizes Available: Odd sizes: 3", 5", 7", and 9", Even Sizes: 4" through 18"

Lengths Available: 6" through 591/2"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Fabrication:** Sheets of metal are cut per diameter stretch out at 5' lengths. Then rolled into desired diameters, creating a solid round tube with one longitudinal seam which is butted up, tack welded on 4 inch centers, and then fully welded. A  $\frac{1}{4}$  inch lip is rolled out on each end of the pipe to accept the clamp connection.

**Connection:** Straight sections and fittings come with a ½" rolled out lip, butting up the straight sections and fittings to accept the clamp on connection. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings

**Welded Pipe One Seam with Clamp Connection** 

## **WELDED ELBOW** with Clamp Connection

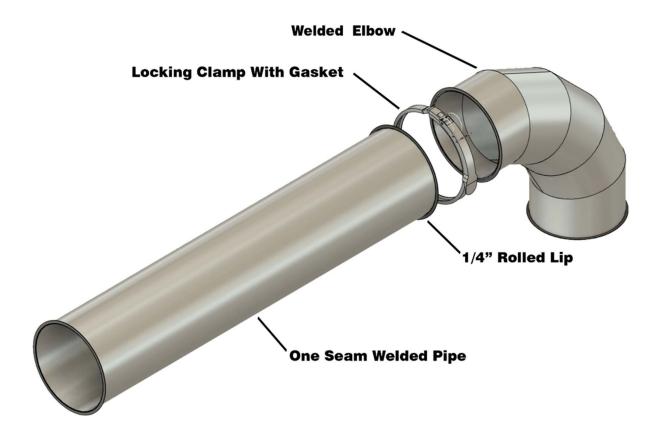

Pressure Class Rating: Negative 10" Water Gauge Max

Sizes Available: Odd sizes: 3", 5", 7", and 9", Even Sizes: 6" through 18"

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Fabrication:** Elbows are available at any angle. Segmented elbows have a welded transverse seam and a welded longitudinal seam. Radius is standard 1.5x centerline although any radius is available.

**Connection:** Elbows come with a  $\frac{1}{4}$ " rolled out lip. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings.

## WELDED REDUCER with Clamp Connection

Pressure Class Rating: Negative 10" Water Gauge Max

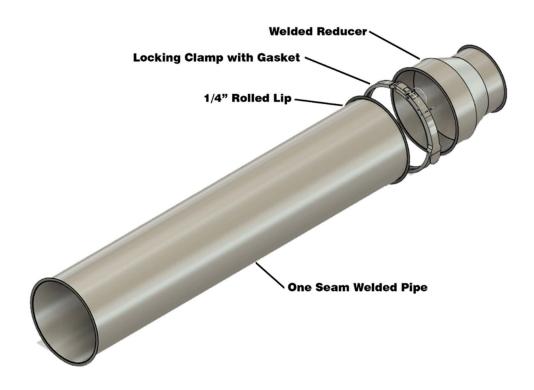

Sizes Available: Odd sizes: 3", 5", 7", and 9", Even Sizes: 6" through 18"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Lengths Available:** Length of the reducer is determined by the set of the reducer. Length is equal to 3 times the largest set, 4" minimum.

**Fabrication:** Reducers are made with welded longitudinal seams and with welded collars. Standard reducers are concentric, however eccentric and offsetting reducers are available.

**Connection:** Reducers come with a ¼" rolled out lip. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings.

#### Welded Pipe One Seam with Clamp Connection

#### FULL BODY TAKEOFF with Clamp Connection

Pressure Class Rating: Negative 10" Water Gauge Max

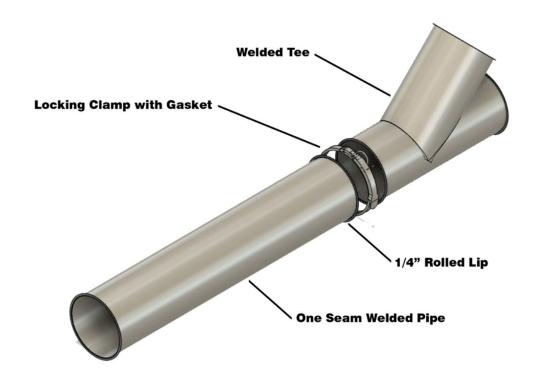

Sizes Available: Odd sizes: 3", 5", 7", and 9", Even Sizes: 4" through 18"

Material Available: Standard Galvanized G90, however 304 and 316 stainless steels are available.

**Lengths Available:** Length of tees and crosses are determined by the diameter of the branch.

**Fabrication:** Lateral 45 degree tees and crosses are the typical side take off, however branches can come off at any angle. Tees and crosses have welded seams. This fitting can be used to reduce the system's main truck line.

**Connection:** Tees and Crosses come with a ½" rolled out lip. The clamp connection is easily installed creating a strong and airtight connection. Connection Clamp material is zinc plated with gasket material, ethylene propylene diene monomer (EPDM). There are no screws required to make the connections, which eliminates screw threads on the inside of the pipe and fittings.

#### **WELDED PIPE ONE SEAM** with Welded Connections

Pressure Class Rating: Negative 10" Water Gauge Max

Sizes Available: 3" through 38"

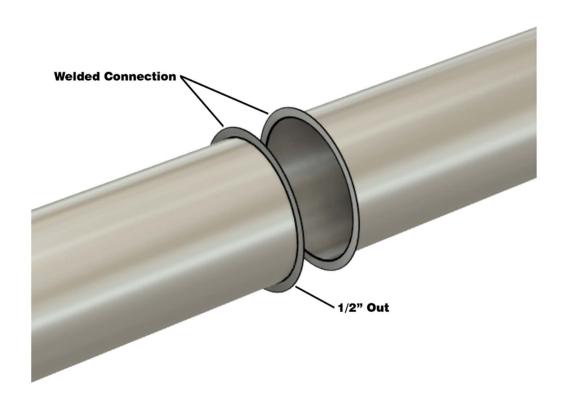

Lengths Available: 6" through 59"

Material Available: Standard Galvanized G90, however 304, 316 stainless steels and black iron

materials are available.

**Fabrication:** Sheets of metal are cut per diameter stretch out at 5' lengths. Then rolled into desired diameters, creating a solid round tube with one longitudinal seam which is butted up, tack welded on 4 inch centers, and then fully welded. A ½" inch flange is rolled out on each end of the pipe and associated fittings, butting the pieces together which then allows for applying a fully welded connection.

**Connection:** Connections are made by butting up the 1/2" flange out on the pipe and fittings allowing for a fully welded connection.

**Welded Pipe One Seam with Welded Connection** 

#### WELDED ELBOW with Welded Connection

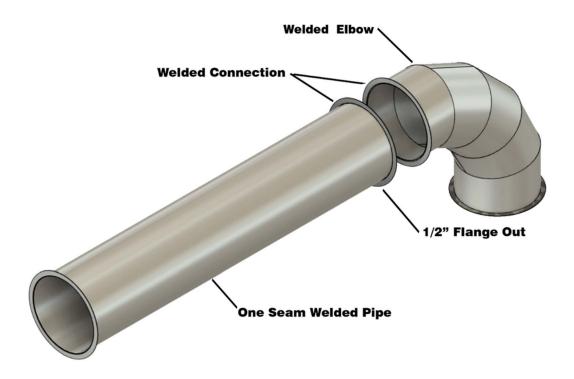

Pressure Class Rating: Negative 10" Water Gauge Max

Sizes Available: 3" through 38"

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Fabrication:** Elbows are available at any angle. Segmented elbows have a welded transverse seam and a welded longitudinal seam. Radius is standard 1.5x centerline although any radius is available.

**Connection:** Connections are made by welding two joining pieces together which will have a ½" flange out.

**Welded Pipe One Seam with Welded Connection** 

## WELDED REDUCER with Welded Connection

Pressure Class Rating: Negative 10" Water Gauge Max

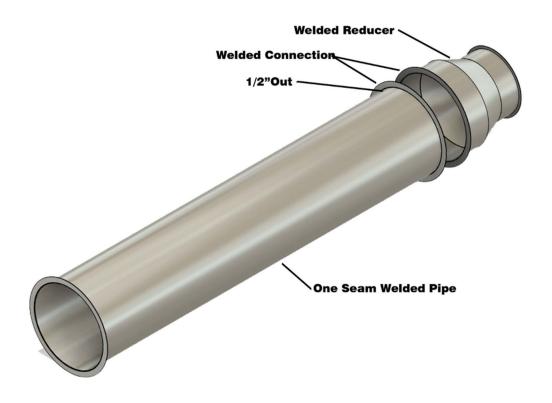

Sizes Available: 3" through 38"

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Lengths Available:** Length of the reducer is determined by the set of the reducer. Length is equal to 3 times the largest set, 4" minimum.

**Fabrication:** Reducers are made with welded longitudinal seams and with welded collars. Standard reducers are concentric, however eccentric and offsetting reducers are available.

**Connection:** Connections are made by welding two joining pieces together which will have a ½" flange out.

**Welded Pipe One Seam with Welded Connection** 

#### FULL BODY TAKEOFF with Welded Connection

Pressure Class Rating: Negative 10" Water Gauge Max

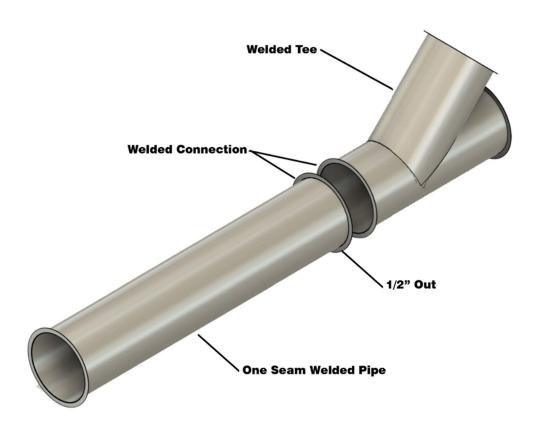

Sizes Available: 3" through 38"

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Lengths Available:** Length of tees and crosses are determined by the diameter of the branch.

**Fabrication:** Lateral 45 degree tees and crosses are the typical side take off, however branches can come off at any angle. Tees and crosses have welded seams. This fitting can be used to reduce the system's main truck line.

**Connection:** Connections are made by welding two joining pieces together which will have a ½" flange out.

#### WELDED PIPE ONE SEAM with Angle Ring Connections

Pressure Class Rating: Negative 30" Water Gauge Max

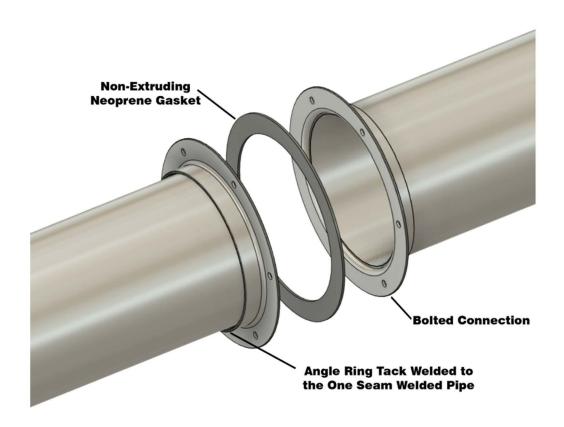

Sizes Available: 3" and up

Lengths Available: 6" through 60"

Material Available: Standard Galvanized G90, Black Iron, 304 and 316 stainless steels are available.

**Fabrication:** Sheets of metal are cut per diameter stretch out at 5' lengths. Then rolled into desired diameters, creating a solid round tube with one longitudinal seam which is butted up, tack welded on 4 inch centers, and then fully welded.

**Connection:** Angle rings are tack welded on the straight pipe. Angle rings have pre punched bolt holes. Connections are made by using neoprene gasket between joining flanges and bolting them together. Angle rings are available to match the ductwork material.

**Welded Pipe One Seam with Angle Ring Connection** 

#### **WELDED ELBOW** with Angle Ring Connection

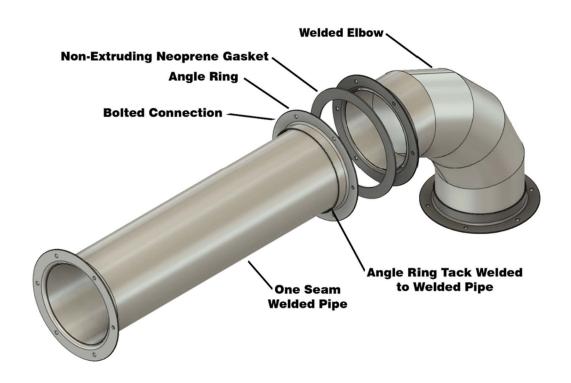

Pressure Class Rating: Negative 30" Water Gauge Max

Sizes Available: 3" and up

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Fabrication:** Elbows are available at any angle. Segmented elbows have a welded transverse seam and a welded longitudinal seam. Radius is standard 1.5x centerline although any radius is available.

**Connection:** An angle ring will be held on the connection of the elbow with a ½" Vanstone flange. This keeps the angle ring in place but also allows it to spin freely to line it up with the pre punched bolt holes of connecting piece. Neoprene gasket is used between the two joining rings and then the rings are bolted together.

#### **Welded Pipe One Seam with Angle Ring Connection**

## WELDED REDUCER with Angle Ring Connection

Pressure Class Rating: Negative 30" Water Gauge Max

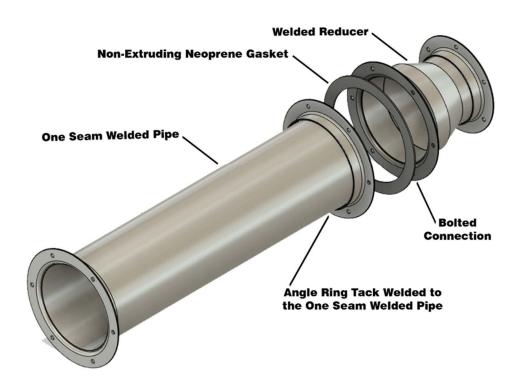

Sizes Available: 3" and up

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Lengths Available:** Length of the reducer is determined by the set of the reducer. Length is equal to 3 times the largest set, 4" minimum.

**Fabrication:** Reducers are made with welded longitudinal seams and with welded collars. Standard reducers are concentric, however eccentric and offsetting reducers are available.

**Connection:** An angle ring will be placed on the ends of the reducer with a ½" Vanstone flange. This keeps the angle ring in place but also allows it to spin freely in order to line up the pre punched bolt holes. Neoprene gasket is used between two joining rings and then the rings are bolted together.

#### **Welded Pipe One Seam with Angle Ring Connection**

## FULL BODY TAKEOFF with Angle Ring Connection

Pressure Class Rating: Negative 30" Water Gauge Max

Sizes Available: 3" and up

Material Available: Standard Galvanized G90, black iron, 304 and 316 stainless steels are available.

**Lengths Available:** Length of tees and crosses is determined by the diameter of the branching duct.

**Fabrication:** Lateral 45 degree tees and crosses are the typical side take off, however branches can come off at any angle. Tees and crosses have welded seams. This fitting can be used to reduce the system's main truck line.

**Connection:** An angle ring will be placed on the ends of the tee with a ½" Vanstone flange. This keeps the angle ring in place but also allows it to spin freely in order to line up the pre punched bolt holes. Neoprene gasket is used between two joining rings and then the rings are bolted together.

## DUST DUCT BLAST GATES

BLAST GATES CLOSE OFF BRANCH LINES NOT IN USE, AS WELL AS CONTROLLING THE SUCTION OF THE SYSTEM AT PARTICULAR POINTS. BLAST GATES ARE FABRICATED TO MATCH THE DUCT MATERIAL OF THE SYSTEM. BLAST GATES ARE HEAVY GAUGE AND ARE DESIGNED TO SLIP INTO NOMINAL DUCT SIZES. BLAST GATES ARE AVAILABLE IN FULL OR HALF SIZES.

## DUST DUCT SPARK ARRESTER

REDUCES SPARKS FROM GRINDING, WELDING, AND CUTTING APPLICATIONS SO AS TO PROTECT THE EXISTING DUST COLLECTION SYSTEM.

#### DUST DUCT FLOOR SWEEP

FLOOR SWEEPS OFFER AN EASY WAY TO CLEAN UP WASTE BY SWEEPING IT RIGHT INTO YOUR DUST COLLECTION SYSTEM. FLOOR SWEEPS ARE AVAILABLE WITH ACCESSIBLE FOOT LATCH OR WITH AN OPEN FACE MODEL THAT REQUIRES A BLAST GATE CLOSURE WHEN NOT IN USE.

#### DUST DUCT FLEXABLE HOSE

FLEXIBLE DUCT HOSES PROVIDE
ADJUSTABLE FINAL CONNECTIONS AND
ALLOW FOR SLIGHT VARIATIONS IF
EQUIPMENT REQUIRES MOVEMENT.
HOSES ARE MADE FROM HEAVY DUTY
RUBBER

# **Dust Duct Pressure Testing**

Dust Duct has been pressure tested to ensure that it can withstand required specified pressures.

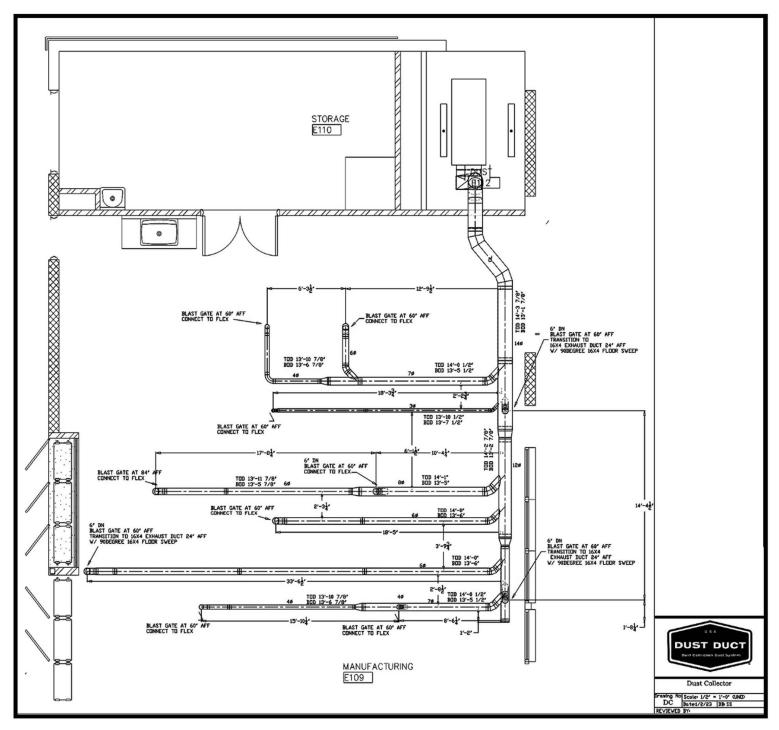

#### **Duct Leakage Test Data**

Project Name:	Dust Collector (Duct Collector Ductwork)	Required Test Pressure:	10" WC	Leakage Class: A	
System Type:	Dust Duct	Duct Construction Class:	2	Leakage Factor (CFM/100 sg ft): 8.9	

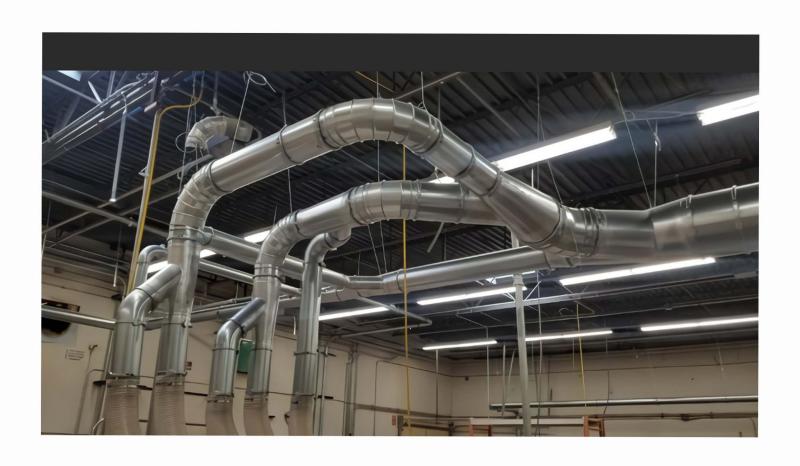

Test Section(s)	Duct Size (in.)	Surface Area (sg.ft.)	Allowable Leakage (cfm)	Actual Test Pressure (in.wg.)	Orifice Diameter (in.)	Orifice Coefficient	Orifice Pressure Drop (in.wg.)	Measured Leakage Rate (cfm)	Pass/Fai

## Dust Duct CAD Drawings

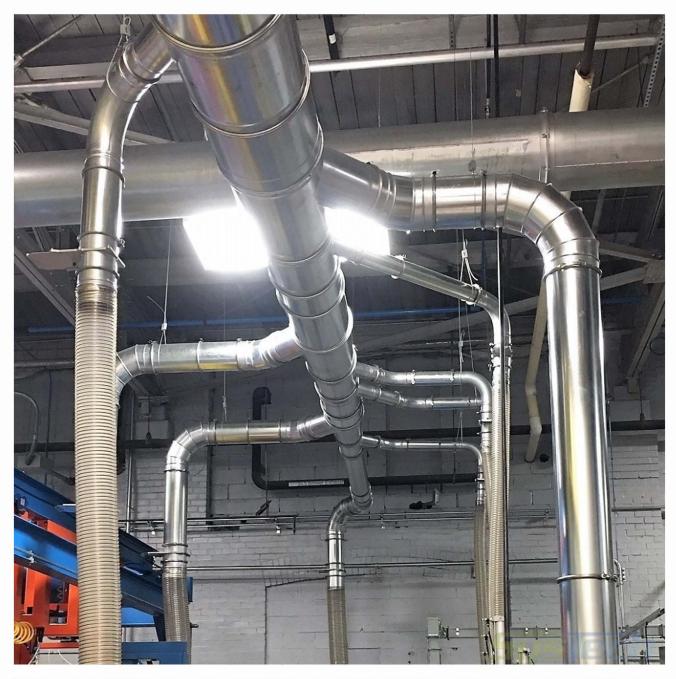

Each Dust Duct order will include an AutoCAD generated drawing(s). This allows the contractor to thoroughly check the pieces of Dust Duct to ensure accuracy. All drawings will have each piece of duct numbered correlating with the actual piece of duct. This provides an easy install for the contractor.
